

In the Claims:

Cancel claims 9-10 and add claims 11-12.

1-10. (Canceled).

11. (New). A continuous casting mold, comprising permanent magnets arranged in a water box of the continuous casting mold and mounted directly on the mold for influencing flow of a liquid metal in the mold by a generated magnetic field, the permanent magnets having, over at least one of width and height thereof, different magnetic strengths or are spaced from each other by different distances for a different field strength and for a different field strength distribution; and rotatable means for pivotally displacing the permanent magnets relative to the mold for adaptation of a magnetic field strength.

12. (New). A continuous casting mold according to claim 11, wherein the rotatable means comprises a rotary spindle.
